

## Cabinet Measures Guide

You will need a steel measuring tape, [Kitchen Measuring Checklist](#), and a pencil. The Kitchen Measuring Checklist has the steps you need so you will not forget!

MAKE A ROUGH DRAWING OF THE ROOM.

MEASURE CEILING HEIGHT.

- To get an accurate measurement, you should measure the height at 2-3 different locations in the room. If the room has soffits, make sure to note and measure them as well.

## Cabinet Measures Guide

MEASURE OVERALL LENGTH OF EACH WALL.

## Cabinet Measures Guide

### MEASURE EACH WALL SECTION (NOT CABINETS).

- Add the measurements to the corresponding wall on the floor plan sketch.

### MEASURE DOOR/WINDOW (INCLUDING TRIM).

- Note the measurements on the Kitchen Measuring Checklist floor plan sketch.

## Cabinet Measures Guide

❑ MEASURE WINDOW DISTANCE OFF FLOOR.

MARK EXACT LOCATION OF WINDOW/DOOR(S).

- When measuring windows, record the wall length on either side of the window. Then measure the height and width of the window, including casing.

❑ MARK CENTERLINE FOR PLUMBING & APPLIANCES.

- You'll need the width, height, and depth for all the appliances, and if you can include the brand and model of each, even better.

## Cabinet Measures Guide

If keeping existing appliance location measure and note the locations of electric, gas, or plumbing outlets.

Any obstructions such as vents, radiators, or floor registers should also be added to the floor plan.

Measure from the wall to the center of the sink. Record that measurement, the sink size, and the type of sink (single or double bowl) on the floor plan.

## Cabinet Measures Guide

If your layout includes an over-the-range microwave, make sure you mark where the outlet you will use is located on the wall.
